

THE VIP CABINS

A mid-range solution for those situations where large trailers are not warranted, but where conventional cabins may not be appropriate. The VIP Series offers some surprising amenities never before available in cabin style facilities. Intelligent engineering, real comfort, solid construction and moderate pricing have placed the VIPs among the most popular units we offer.

The VIPs have been used as the comfort stations for smaller, upscale parties, corporate events and even booked, long term, while indoor facilities are undergoing renovations. The climate control features make these units practical for use in the most extreme weather conditions. Depending on terrain, VIPs can be used with or without the optional, custom-built trailers.

VIP SERIES

VIP Elite

VIP Standard

Featuring clean lines and state-of-the-art engineering, these units are the gold standard when it comes to situations where full sized trailers may not be appropriate due to the size of the event, the size of the venue or the size of the budget. Spacious interiors, fresh water flush commodes, hand-washing sinks with comfortably hot running water, lighted mirrors, climate control and weather-proof carpet. Where a standard 110 volt, 20 amp power supply can be provided, these units can deliver reliable service in temperatures as low as to zero degrees Fahrenheit. Optional custom-built trailers that also serve as entry platforms allow these relatively heavy facilities to be placed in locations where manual placement is not possible.

	Elite	Standard
Ext. Ht. :	95 inches	91 inches
Int. Ht.:	83 inches	79 inches
Width:	54 inches	48 inches
Depth:	46.5 inches	43.5 inches

Heating Unit

Sink w/soap dispenser

Step inside the VIP and it becomes immediately evident that this is, in no way, like ordinary cabin style facilities (port-a-potties). The cut-away view at the top shows the type of equipment used in both the Standard and the Elite. The equipment is similar to that used in top-of-the line RVs and watercraft.
