

# THE 20' SIERRA FLOOR PLAN

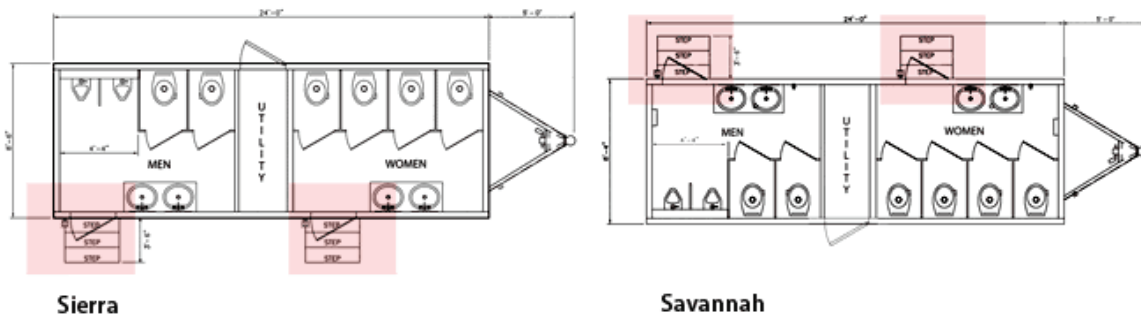

The physical layout and size of the venue will sometimes limit the choices of rest room facilities available to the client. Sierra's designers have taken this into consideration. The basic unit comes in several configurations which are illustrated here.

OVERALL LENGTH INCLUDING TONGUE AND HITCH: 25 FEET / OVERALL WIDTH WITH STEPS DEPLOYED: 11 FEET 10 INCHES

The 20 foot Sierra is essentially the same as the 24' unit, but in a smaller package and two fewer commode stalls.

# SIERRA/SAVANNAH FLOOR PLAN

In locations where access to the facility would be made easier on the opposite side of the trailer, there is a unit available, the Savannah, configured that way. The Savannah is identical to the 24' Sierra except that the layout is reversed and the interior colors are different.
